

How to change Zoom background?

How do I apply new background images in the Zoom?

To add a new background image to your Zoom account, you must initially download the Zoom application to your computer because using the Zoom in web browser you cannot add a background.

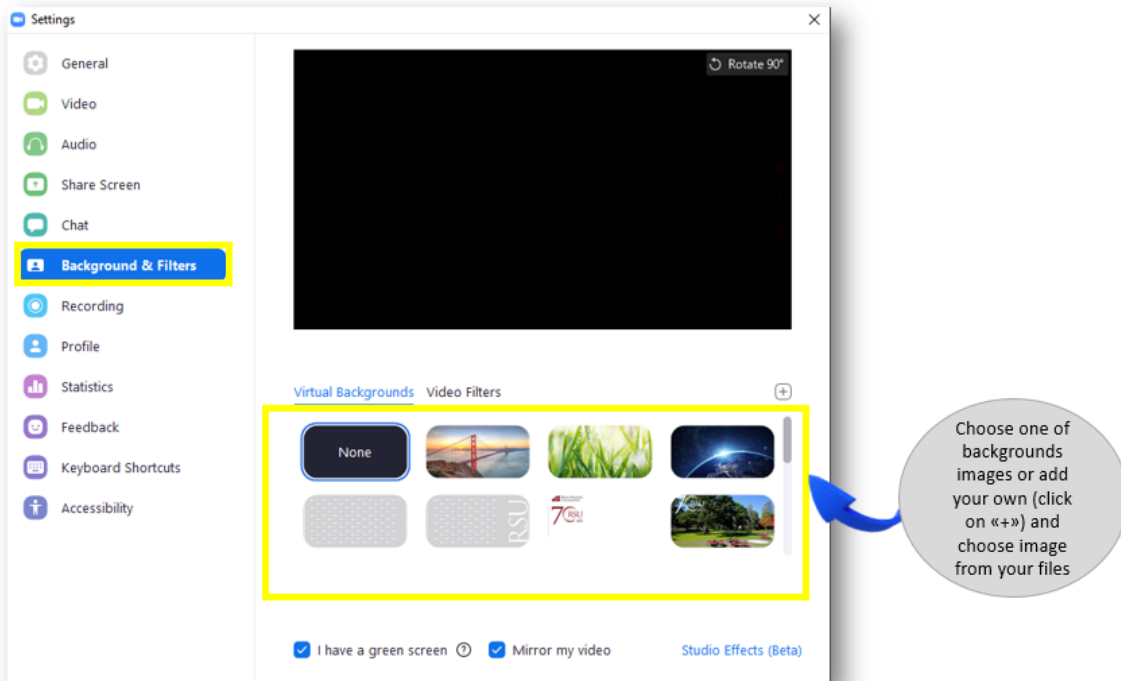

Be aware that the Zoom tool is already installed on all RSU computers, however you can download the Zoom tool on your personal computer [here](#).

Open the Zoom tool and click on **Settings**.

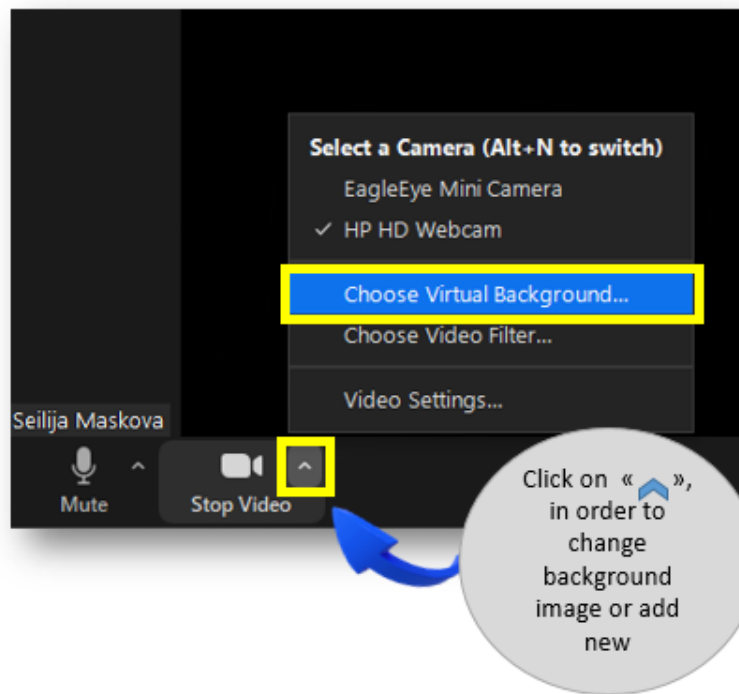

When new window Settings opens, please choose *Backgrounds and Filters* from the side bar.

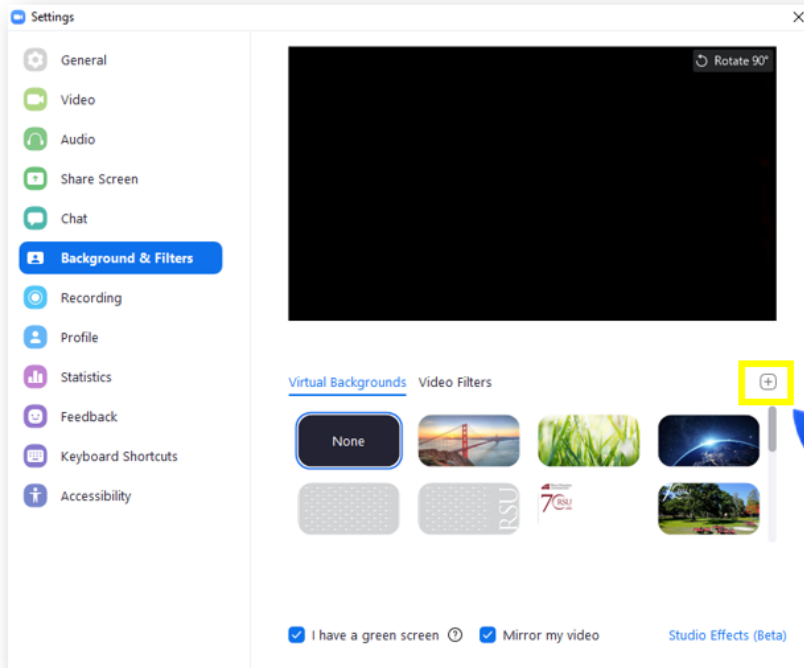

Select one of the background images already installed or add your own image by clicking on “+”.

How do I add a background image when the meeting has already started?

Click on **arrow** next to **Stop Video** button (see screenshot below) and select **Choose Virtual Background**

When Settings panel opens, from the left side bar select **Backgrounds and Filters**. Click on the background image you would like to use or upload Background image from your computer. Then close the Settings window.

Click on «+»,
in order to
add new
Virtual
Background
